

CLAIMS

What is claimed is:

1. A table comprising:

a table top having a top surface and a bottom surface;

a first leg assembly attached to the table top;

a second leg assembly attached to the table top;

a first connecting member attached to the bottom surface of the table top,

the first connecting member having an outer side and an inner side; and

a handle attached to the inner side of the first connecting member,

wherein a space is formed between the handle and the bottom surface of the table top so that a person can place their fingers in the space in order to lift the table.

2. The table as recited in claim 1, wherein the handle comprises:

a connecting portion having at least a portion of the connecting portion

attached to the inner side of the first connecting member; and

a handle portion.

3. The table as recited in claim 2, wherein the connecting portion comprises

an angled L-iron, wherein at least a portion of the angled L-iron is connected to the inner side of the first connecting member.

4. The table as recited in claim 1, wherein the handle is formed discretely

from the first connecting member.

5. The table as recited in claim 2, wherein the connecting portion is formed discretely from the handle portion.

6. The table as recited in claim 1, further comprising a second connecting member facing the first connecting member.

7. The table as recited in claim 6, further comprising a first connecting bar disposed between the first connecting member and the second connecting member.

8. The table as recited in claim 7, further comprising a first support assembly having a first end and a second end, the first end being connected to the first leg assembly and the second end being connected to the first connecting bar.

9. The table as recited in claim 6, further comprising a second connecting bar disposed between the first connecting member and the second connecting member.

10. The table as recited in claim 9, further comprising a second support assembly having a first end and a second end, the first end being connected to the second leg assembly and the second end being connected to the second connecting bar.

11. The table as recited in claim 6, further comprising:

a third connecting member placed in the same plane as the first connecting member on the bottom surface of the table top;

a fourth connecting member placed in the same plane as the second connecting member on the bottom surface of the table top, the third connecting member facing the fourth connecting member; and

a second connecting bar disposed between the third connecting member and the fourth connecting member.

12. The table as recited in claim 1, wherein the table top comprises blow-molded plastic.

13. The table as recited in claim 12, wherein the first connecting member is formed integrally with the bottom surface of the table top.

14. The table as recited in claim 1, wherein the first leg assembly and the second leg assembly are pivotably connected to the table top.
